

TEACHER & PARENT GUIDE

Learning Focus:

Goal: Understand capacity (how much a container holds) using informal units (e.g., cups). Curriculum Link: Australian Curriculum v9.0 (AC9M1M02).

How to Guide the Learner:

The “Pour” Test: Use a consistent unit (like a small plastic cup) to fill different containers. Estimation: Before pouring, ask, “How many cups do you think this jug will take?” Testing their guess against reality is the core of scientific math.

Name: _____

Date: _____

Part 1: How Much Does it Hold?

Count how many small cups are needed to fill each container. Write the number in the box.

1. Small Glass

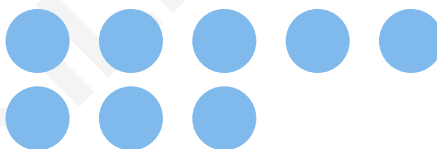

Total: _____ cups

2. Water Jug

Total: _____ cups

3. Large Bowl

Total: _____ cups

4. Plastic Bottle

Total: _____ cups

5. Measuring Cup

Total: _____ cups

Part 2: Compare!

Which container holds the MOST? Circle it below:

Small Glass | Water Jug | Large Bowl | Plastic Bottle | Measuring Cup
