Addition and Subtraction as Inverse Operations

Addition and subtraction undo each other. A whole and two parts create related number sentences that can solve unknown values.

We are learning to...

recognise and explain the connection between addition and subtraction as inverse operations, apply to partition numbers and find unknown values in number sentences

Identify whole and parts**Write related facts****Find unknown****Check with inverse**

Success criteria

- I can identify whole and parts.
- I can write fact families.
- I can solve unknowns.

Key vocabulary

inverse operations

unknown

number sentence

Use a fact family for 37, 25 and 62

$$37 + 25 = 62$$

$$25 + 37 = 62$$

$$62 - 37 = 25$$

$$62 - 25 = 37$$

The same whole and parts create two addition and two subtraction facts.

Find an unknown part

84	
29	? =

$$29 + ? = 84$$

Use $84 - 29$ to find the missing part, then add to check.

Show what you know

Write a fact family for 28, 35 and 63.

Think silently, show your reasoning, then explain it to a partner.

Expected response

$62 - 37 = 25$ is related to $37 + 25 = 62$.

If students are unsure

Addition is commutative; subtraction usually is not.

inverse operations
