Numbers Beyond 10 000

Large numbers are organised in groups of three digits. Each digit has a place value, and the same number can be renamed without changing its total value.

We are learning to...

recognise, represent and order natural numbers using naming and writing conventions for numerals beyond 10 000

Read the periods

Build place value

Rename

Compare

Order

Explain

Success criteria

- I can read numbers beyond 10 000.
- I can write number names.
- I can use place value.

Key vocabulary

place value

numeral

natural number

Read and represent 42 507

TEN-THOUSANDS	THOUSANDS	HUNDREDS	TENS	ONES
4	2	5	0	7

42 507 is forty-two thousand five hundred and seven. The zero keeps the tens place.

Compare numbers from the highest place first

42 507

42 750

40 725

42 750 is greatest

Compare ten-thousands first, then thousands, hundreds, tens and ones.

Show what you know

Read 63 409 aloud.

Think silently, show your reasoning, then explain it to a partner.

Expected response

42 507 means forty-two thousand five hundred and seven.

If students are unsure

A zero can hold an empty place, as in 42 507.
