Add and Subtract with Place Value

Place value lets us split numbers into hundreds, tens and ones, regroup equal values and choose efficient addition or subtraction strategies.

We are learning to...

add and subtract two- and three-digit numbers using place value to partition, rearrange and regroup numbers to assist in calculations without a calculator

Estimate

Partition

Regroup

Calculate

Check with inverse

Success criteria

- I can partition numbers.
- I can regroup accurately.
- I can add three-digit numbers.

Key vocabulary

partition

regroup

inverse

Partition to add $268 + 157$

$268 + 157$

→

$200 + 100$

→

$60 + 50$

→

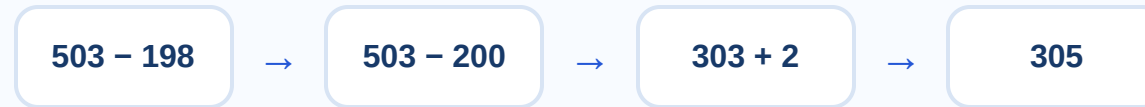

$8 + 7$

→

425

Combine hundreds, tens and ones, then regroup 15 ones as 1 ten and 5 ones.

Use compensation for subtraction

Subtract a friendly number, then adjust.

Show what you know

Solve $268 + 157$ by partitioning.

Think silently, show your reasoning, then explain it to a partner.

Expected response

$$268 + 157 = 425.$$

If students are unsure

Trade 10 ones for 1 ten or 10 tens for 1 hundred.
