Mathematical Modelling in Practical Problems

Mathematical modelling turns a practical situation into a diagram, table or number sentence, then connects the solution back to the context.

We are learning to...

use mathematical modelling to solve practical problems involving additive and multiplicative situations including financial contexts; formulate problems using number sentences and choose calculation strategies, using digital tools where appropriate; interpret and communicate solutions in terms of the situation

**Understand
context****Choose
representation****Formulate****Solve****Check****Interpret**

Success criteria

- I can represent situations.
- I can formulate number sentences.
- I can use multiple operations.

Key vocabulary

mathematical model

strategy

interpret

Model a multi-step shopping problem

3 × notebook
3 × \$4

5 × pencil
5 × \$2

Total \$22

Three \$4 notebooks cost \$12 and five \$2 pencils cost \$10; the total is \$22.

Choose operations from the situation

Some situations require more than one operation.

Show what you know

Model 4 packs of 6 shared among 3 children.

Think silently, show your reasoning, then explain it to a partner.

Expected response

Three notebooks at \$4 each cost \$12.

If students are unsure

Choose numbers and operations that match the question.
