Chance in Everyday Events

Chance language describes how possible an event is. Certain events must happen, impossible events cannot happen, and likely or unlikely events depend on the situation.

We are learning to...

identify practical activities and everyday events involving chance; describe possible outcomes and events as likely or unlikely and identify some events as certain or impossible explaining reasoning

List outcomes

Check conditions

Place on chance
scale

Explain evidence

Success criteria

- I can identify chance events.
- I can list outcomes.
- I can use certain/impossible.

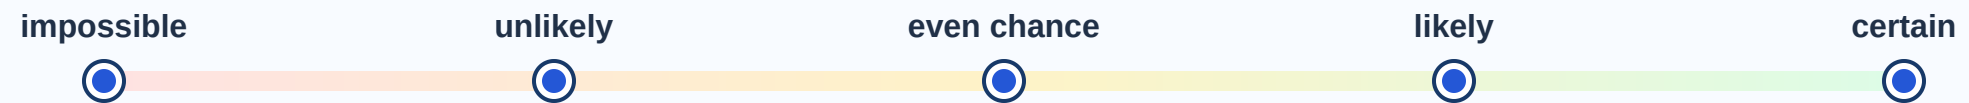

Key vocabulary

outcome

likely

impossible

Use a chance scale

Reasoning must use the possible outcomes or known conditions.

Analyse a bag of counters

$$\text{red} \times 6 \text{blue} \times 2 \text{green} \times 0$$

Red is likely, blue is possible but unlikely, and green is impossible if there are no green counters.

Show what you know

Give a certain event.

Think silently, show your reasoning, then explain it to a partner.

Expected response

Rolling 7 on a standard six-sided die is impossible.

If students are unsure

Likely events can still fail to occur.

outcome

likely

impossible
