

AC9M3SP01 • Year 3 Mathematics

Classifying Objects by Features and Uses

Objects can be compared and classified by features such as faces, edges, vertices, curved surfaces, strength, stability and how they are used.

We are learning to...

make, compare and classify objects, identifying key features and explaining why these features make them suited to their uses

Observe object

Identify features

Compare

Classify

Link feature to use

Success criteria

- I can identify 3D features.
- I can compare objects.
- I can classify objects.

Key vocabulary

feature

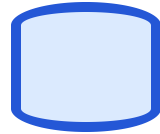

classify

suitable

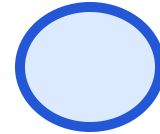

Compare common three-dimensional objects

cube
6 flat faces

cylinder
2 flat + curved

sphere
curved surface

prism
matching ends

Use observable features and purpose, not only the object's name.

Link features to uses

Object	Useful feature
box	flat faces stack
ball	curved surface rolls
can	stable base + curved side

A feature can make an object more suitable for a particular use.

Show what you know

Name a feature of a cube.

Think silently, show your reasoning, then explain it to a partner.

Expected response

Flat faces help a box stack.

If students are unsure

Use structural features relevant to the purpose.

feature

classify
