Maps and Two-Dimensional Representations

A map is a two-dimensional representation viewed from above. Symbols, labels, keys and relative position language help locate landmarks and communicate routes.

We are learning to...

interpret and create two-dimensional representations of familiar environments, locating key landmarks and objects relative to each other

Orient map**Identify
landmarks****Use position
language****Follow route****Create representation**

Success criteria

- I can interpret maps.
- I can use landmarks.
- I can use relative position.

Key vocabulary

representation

landmark

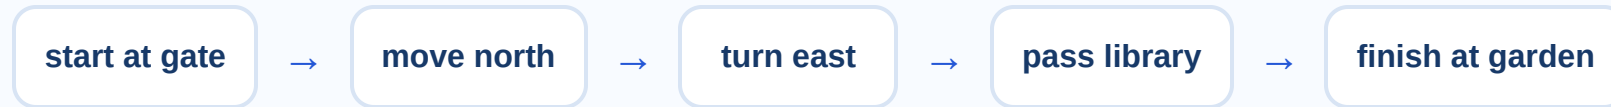

relative position

Read a simple grid map

Gate	.	Garden
.	Library	.
Oval	.	Classroom

Use rows, columns, landmarks and direction words to describe positions.

Create a route between landmarks

Directions must be ordered and use a consistent map orientation.

Show what you know

What does a map key do?

Think silently, show your reasoning, then explain it to a partner.

Expected response

A map key explains the meaning of symbols.

If students are unsure

Maps usually show familiar spaces from above.
