PRACTICE SHEET – FOUNDATION YEAR

Ref: AC9SFU02 – Forces and Motion

How Objects Move in Different Ways

Exploring Roll, Bounce and Movement

Learning about Size, Shape and Material

Observe, compare and think like a scientist!

1 Choose the correct word.

Circle the word that best completes each sentence.

1. A ball that goes up and comes back down is (roll / bounce / spin).
2. A toy that turns around like a top is (roll / bounce / spin).
3. A ball that moves along the ground is (roll / bounce / spin).
4. A paper airplane moves through the air when we (roll / throw / spin) it.
5. An object that goes faster down a slope is (big / small / heavy).

2 Match the object to the way it moves.

Draw a line to match.

1. Soccer ball
2. Basketball
3. Top
4. Bouncy ball
5. Paper airplane

3 Fill in the table.

Look at each row and complete the table.

Object	Shape	Size	How it moves	Why? (Shape and Size)
Example: Tennis ball	Round	Medium	Rolls	Round shapes roll. This size is easy to roll.
1.				
2.				
3.				

Word bank: round square big small medium rolls bounces slides spins

4 Materials matter!

Look at the balls. Write the material each one is made from using the words in the box.

plastic foam cloth rubber

Answer the questions.

- a) Which ball will bounce the highest?
- b) Which ball will roll the fastest on the floor?

5 Predict and then test! (Roll)

Predict: Which ball will roll the farthest down the slope? Write 1 (farthest) to 4 (shortest) in the boxes.

Test it! Roll the balls down the same slope. Record the order: 1 (farthest) to 4 (shortest).

What did you notice? _____

6 Predict and then test! (Bounce)

Predict: Which ball will bounce the highest? Write 1 (highest) to 4 (lowest) in the boxes.

Test it! Drop each ball from the same height. Record the order: 1 (highest) to 4 (lowest).

What did you notice? _____

7 Traditional instructive toys of First Nations Australians

Read each statement and tick (✓) True or False.

	True	False
1. Boomerangs are curved to help them return.		
2. Kylies (dice) are round so they can tumble and roll.		
3. Woomeras are long and curved to help spears travel far.		
4. Bullroarers are flat and balanced to spin and make sound.		
5. These toys are used to teach skills, stories and knowledge.		

8 Think like a scientist!

Choose one toy from the box. Draw it and explain how the size, shape and material help it move.

This toy moves by _____.
The shape helps it _____.
The size helps it _____.
The material helps it _____.
I think this toy is special because _____.

Objects move in different ways – they roll, bounce, fly, spin and stop.
The shape, size and material affect how they move.
By observing, comparing and exploring, we learn so much!
