

## TEACHER SLIDE

# COMPARING COLLECTIONS USING COUNTING

Ref: AC9MFN03\_E2

We can count collections to find more or less!

**Learning Intention:** I can compare two or more collections by counting and say which has more or less.

### KEY IDEA

When we compare collections, we find out which collection has **more**, which has **less**, or if they have the **same** number.

#### MORE

Left has **more** apples.

#### LESS

Left has **less** apples.

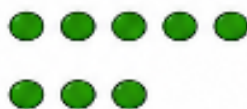

#### SAME

Both have the **same** number of apples.

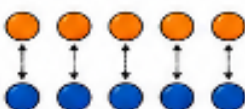

### WAYS TO COMPARE USING COUNTING

#### COUNT EACH COLLECTION

Count both groups.  
Compare the numbers.

#### MATCH ONE-TO-ONE

Match items one-to-one.  
See which group runs out first.

#### MAKE EQUAL GROUPS

Make equal groups to help compare amounts.

### EXAMPLES

#### Which has MORE?

Group A

Group B

Count: **A = 4**    **B = 2**

Group A has **more** apples.

#### Which has LESS?

Group A

Group B

Count: **A = 3**    **B = 5**

Group A has **less** butterflies.

#### Are they the SAME?

Group A

Group B

Count: **A = 4**    **B = 4**

Both groups have the **same** number of flowers.

### TALK TOGETHER

- Which collection has more? Why?
- Which collection has less? Why?
- How did you know?
- Are the collections the same?

### CLASSROOM IDEAS

- Use counters, blocks, or toys.
- Encourage students to touch and count each item once.
- Rearrange items — the amount does not change!
- Celebrate strategies and thinking.

### REMEMBER

Counting helps us compare.  
We can find **more**, **less**, or the **same**!

★ Great mathematicians count carefully and explain their thinking! ★
