

Topic: Sorting by Attributes**Teacher/Parents instruction: [DO - NOT -PRINT-THIS- PAGE]**

1. Introduce one attribute at a time (e.g. colour, then shape, then size).
2. Model how to compare objects and explain why they belong in the same group.
3. Encourage students to use mathematical language such as **same, different, sort, group, colour, shape, big, small, circle, square, and triangle**.
4. Ask students to explain their sorting rule: *"Why did these objects go together?"*
5. Complete the worksheet independently or in small groups, discussing answers as a class.

Extension:

- Challenge students to sort the same objects in **two different ways** (e.g. first by colour, then by shape).
- Ask students to create their own collection of objects and explain the sorting rule they used.

Materials Needed:

- Printed worksheet
- Crayons or coloured pencils

Country	Curriculum Code	Curriculum Statement
Australia	AC9MFST01	Sort, describe and name familiar objects and explain the basis for their grouping.
United States (CCSS)	CCSS.MATH.CONTENT.K.MD.B.3	Classify objects into given categories; count the numbers of objects in each category and sort the categories by count.
United Kingdom	Year 1 – Geometry: Properties of Shapes	Sort common 2D and 3D shapes and everyday objects using simple properties.
India (NCF 2023 / NEP 2020)	Foundational Stage – Mathematics: Classification and Sorting	Sort and classify objects based on colour, shape, size and other observable attributes.

Name: _____ Grade: _____ Date: _____

Students page:**Q****Objects / Images****Question**

1

Circle all the **red** things.

2

Put all the **blue** shapes together.

3

Sort by **colour**.

4

Circle all the **circles**.

5

Put all the **triangles** together.

6

Sort into **big** and **small** animals.

7

Group the same **fruit** together.

8

Sort the **vehicles** into groups.

9

Match the objects that are the **same**.

10

Which one does **not belong**? Circle it.
