

# Numbers to 120

Recognise, represent and order numbers using numerals, number lines and charts

## Learning intention

- Read, write and name numbers from 0 to at least 120.
- Locate and order numbers on tracks, number lines and hundreds charts.
- Explain a number using tens and ones.

## Teach and model

- Build a number with bundles of ten and single objects.
- Compare the tens first, then compare the ones when the tens match.
- Move one space left or right on a chart for one less or one more; move a row for ten less or ten more.

## Check understanding

- What comes before and after 99?
- Order 16, 61 and 66 and explain your choice.
- Place 74 on an empty number line and justify its position.

## Common misconceptions

- Reversing similar numerals such as 16 and 61.
- Thinking 100 is followed by 200 instead of 101.
- Comparing only the final digit instead of checking tens first.

## Quick classroom routine

- Say it: teacher names a number and students show its numeral.
- Build it: represent the number with tens and ones.
- Place it: mark the number on a line or chart and name its neighbours.
