

Science Understanding

Exploring the world around us

What is Science Understanding?

Science Understanding is about noticing and learning about the world around us.

We **observe** things carefully and **describe** what we see, feel or hear.

What can we observe?

Living things

They grow, move, eat and breathe.

Objects

We can see and touch them.

Materials

Things are made from different materials.

Movement

Things can move in different ways.

Our Senses

We use our eyes, ears, nose, tongue and hands.

Words we use in Science

big

small

soft

hard

smooth

rough

fast

slow

How do we do Science?

- Look closely.
- Ask questions.
- Talk about what we notice.
- Share our ideas.

Science helps us explore, learn and take care of our world!
