

Science in daily life

describe how people use science in their daily lives, including using patterns to make scientific predictions.

Learning intention

- describe how people use science in their daily lives, including using patterns to make scientific predictions.

Teach and model

- sharing examples of how they have used science knowledge at home.
- exploring how engineers use knowledge of forces to create new playground equipment or toys.
- identifying how we use pushes and pulls when preparing meals, and the tools that help us push or pull objects.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
