

Measure and compare objects based on length, capacity and mass using appropriate uniform informal units and smaller units for accuracy when necessary

Learning intention

- measure and compare objects based on length, capacity and mass using appropriate uniform informal units and smaller units for accuracy when necessary.

Teach and model

- using balance scales to compare the mass of several objects.
- recognising that the same informal unit needs to be used when measuring.
- comparing the capacity of several containers using sand and units such as a spoon or cup.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
