

Recognise and describe one-half as one of 2 equal parts of a whole and connect halves, quarters and eighths through repeated halving

Learning intention

- recognise and describe one-half as one of 2 equal parts of a whole and connect halves, quarters and eighths through repeated halving.

Teach and model

- creating halves using measurement attributes.
- dividing a shape into equal parts and relating the number of parts to the unit fraction.
- creating halves of a range of collections sets by sharing collections into 2 equal groups.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
