

Create different graphical representations of data using software where appropriate; compare the different representations, identify and describe common and distinctive features in response to questions

Learning intention

- create different graphical representations of data using software where appropriate; compare the different representations, identify and describe common and distinctive features in response to questions.

Teach and model

- creating different data displays.
- comparing picture graphs with one-to-one column graphs of the same data.
- using dot plots, sticker charts, picture graphs, bar charts and column graphs to represent data.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
