

Interpret and create two-dimensional representations of familiar environments, locating key landmarks and objects relative to each other

Learning intention

- interpret and create two-dimensional representations of familiar environments, locating key landmarks and objects relative to each other.

Teach and model

- designing the layout of a space.
- sketching a map within the classroom indicating where they have hidden an object.
- identifying differences in the representation of a place on a map, in an aerial photograph.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
