

Create and compare different graphical representations of data sets including using software where appropriate; interpret the data in terms of the context

Learning intention

- create and compare different graphical representations of data sets including using software where appropriate; interpret the data in terms of the context.

Teach and model

- using digital tools, including generative artificial intelligence tools or graphing software.
- comparing various student-generated data representations and describing their similarities and differences.
- selecting appropriate formats or layout styles to present data as information, depending on the type of data and the audience.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
