

Identify sources of heat energy and examine how temperature changes when heat energy is transferred from one object to another

Learning intention

- identify sources of heat energy and examine how temperature changes when heat energy is transferred from one object to another.

Teach and model

- recognising that changes in heat energy can be measured using a thermometer.
- modelling the movement of heat from one object to another using drawing or role-play.
- investigating how well heat is transferred by different types of materials such as metals.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
