

Recognise and extend the application of place value to tenths and hundredths and use the conventions of decimal notation to name and represent decimals

Learning intention

- recognise and extend the application of place value to tenths and hundredths and use the conventions of decimal notation to name and represent decimals.

Teach and model

- counting large quantities of mixed notes and coins, writing the total using dollars and cents.
- using materials to show the multiplicative relationship between the whole, tenths and hundredths.
- comparing the way money and measures are read and said, and explaining how they are the same and different.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
