

Choose and use estimation and rounding to check and explain the reasonableness of calculations including the results of financial transactions

Learning intention

- choose and use estimation and rounding to check and explain the reasonableness of calculations including the results of financial transactions.

Teach and model

- recognising the effect of rounding in addition and multiplication calculations; rounding both numbers up.
- using proficiency with basic facts to estimate the result of a calculation and say what amounts the answer will be between.
- using rounded amounts to complete an estimated budget for a shopping trip or an excursion, explaining why overestimating the amounts is appropriate.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
