

Pose investigable questions to identify patterns and test relationships and make reasoned predictions

Learning intention

- pose investigable questions to identify patterns and test relationships and make reasoned predictions.

Teach and model

- asking questions and making predictions to test relationships.
- posing investigable questions about landscape features and how they were changed by weathering, erosion, transportation or deposition.
- making reasoned predictions about the habitat a plant or animal lives in or the observable effect of light interacting with an object.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
