

Apply knowledge of equivalence to compare, order and represent common fractions including halves, thirds and quarters on the same number line and justify their order

Learning intention

- apply knowledge of equivalence to compare, order and represent common fractions including halves, thirds and quarters on the same number line and justify their order.

Teach and model

- explaining equivalence and order between fractions using number lines, drawings and models.
- applying factors and multiples to fraction denominators, such as halves with quarters, eighths and twelfths, and thirds with sixths.
- comparing and ordering fractions by placing cards on a string line across the room and referring to benchmark fractions to justify their position.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
