

Establish properties of quadrilaterals using congruent triangles and angle properties, and solve related problems explaining reasoning

Learning intention

- establish properties of quadrilaterals using congruent triangles and angle properties, and solve related problems explaining reasoning.

Teach and model

- identifying properties of quadrilaterals related to side lengths, parallel sides, angles, diagonals and symmetry.
- establishing the properties of squares, rectangles, parallelograms, rhombuses, trapeziums and kites using geometric properties and proof.
- applying the properties of triangles and quadrilaterals to construction designs such as car jacks, scissor lifts, folding umbrellas, toolboxes and cherry pickers.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
