

Repeated Halving

Elaboration 3 · Halving again to make quarters and eighths

ELABORATION FOCUS

Using repeated halving to subdivide shapes into halves, quarters and eighths; naming the parts and showing a quarter is a half of a half and an eighth is a half of a quarter.

LEARNING INTENTION We are learning to halve again to make quarters and eighths, and name each part.

Halve it

Halve again

Quarters

Eighths

Same size

1

Halve the Whole

Halve a shape into 2 equal parts. Each part is one-half.

2

Halve Each Half

Halve each half to make quarters; halve again for eighths.

3

Compare Parts

A quarter is a half of a half; an eighth is a half of a quarter.

MODEL BY REPEATED HALVING

Halve the same whole again and again. Shade one part and name it.

Halves

$\frac{1}{2} = 1 \text{ of } 2$

Quarters

$\frac{1}{4} = \text{half of a half}$

Eighths

$\frac{1}{8} = \text{half of a quarter}$

The same whole makes 2 halves, 4 quarters or 8 eighths — each part is equal.

TEACHER MODELLING ROUTINE

I do → We do → You do

WATCH FOR

Unequal parts — every halved part must be the same size.

REMEMBER

A quarter is a half of a half; an eighth is a half of a quarter.

MATERIALS

Paper strips, fraction bars, folded circles, grid paper.
