

One Object, One Value

AC9M1ST02_E4 Representing data with objects and drawings where one object represents one value; describing the displays and finding frequencies by counting.

Learning Intention: I can use one object for one value and count how many in each group.

1. One Each

One object = one answer.
one block for one vote
no object stands for two.

2. Build

Stack them in columns.
same-sized objects
one group per column.

3. Count

Find the frequency.
how many in each column?
count to find the total.

💡 Model It

Fruit chart: apples has 4 blocks, bananas has 3. Each block is one child. Apples has the higher frequency: 4.

Let's Talk

How many does one object stand for?

How many in each column?

Which is bigger?

What pattern do you see?

For Teachers & Parents

Use one object per answer:
blocks, counters or drawings.

Build equal columns:
so counts can be compared.
Count each group's frequency.
