

Analyse how meaning and style are achieved through syntax

Learning intention

- analyse how meaning and style are achieved through syntax.

Teach and model

- considering how abstraction in a noun group allows for greater generalisation of complex ideas in a sentence.
- considering how nominalisation affects the way in which events are constructed and explained, making some information more explicit than other information.
- analysing how logical relations between ideas are built up by combining independent with dependent clauses indicating cause, result, manner, concession, condition, and so on.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
