

Construct scatterplots and comment on the association between the 2 numerical variables in terms of strength, direction and linearity

Learning intention

- construct scatterplots and comment on the association between the 2 numerical variables in terms of strength, direction and linearity.

Teach and model

- informally using a line of good fit by eye to discuss reliability of any predictions.
- exploring how scatter plots and association help data scientists gain insights into the data, identify relationships.
- investigating the relationship between 2 variables of spear throwers used by First Peoples of Australia by using data to construct scatterplots.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
