

# Identify common uses and represent halves, quarters and eighths in relation to shapes, objects and events

## Learning intention

- identify common uses and represent halves, quarters and eighths in relation to shapes, objects and events.

## Teach and model

- demonstrating and using halves and quarters in folding activities.
- demonstrating how food items can be cut in halves, quarters or eighths.
- recognising that halves and quarters can be used to describe lengths, positions and distances.

## Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

## Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

## Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
