

Recognise and explain the connection between addition and subtraction as inverse operations, apply to partition numbers and find unknown values in number sentences

Learning intention

- recognise and explain the connection between addition and subtraction as inverse operations, apply to partition numbers and find unknown values in number sentences.

Teach and model

- using the inverse relationship between addition and subtraction to find unknown values with a calculator.
- partitioning numbers using materials, part-part-whole diagrams or bar models, and recording addition and subtraction facts for each representation.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
