

Identify which metric units are used to measure everyday items; use measurements of familiar items and known units to make estimates

Learning intention

- identify which metric units are used to measure everyday items; use measurements of familiar items and known units to make estimates.

Teach and model

- identifying items that have a mass of one kilogram or 500 grams.
- choosing and using metres to estimate the dimensions of the classroom.
- examining the packaging on supermarket items to determine the metric unit used to describe the mass or capacity of the contents.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
