

Express natural numbers as products of their factors, recognise multiples and determine if one number is divisible by another

Learning intention

- express natural numbers as products of their factors, recognise multiples and determine if one number is divisible by another.

Teach and model

- researching divisibility tests and explaining each rule using materials.
- demonstrating and reasoning that all multiples can be formed by combining or regrouping.
- using divisibility tests to determine if larger numbers are multiples of one-digit numbers.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
