

Check and explain the reasonableness of solutions to problems including financial contexts using estimation strategies appropriate to the context

Learning intention

- check and explain the reasonableness of solutions to problems including financial contexts using estimation strategies appropriate to the context.

Teach and model

- considering the type of rounding that is appropriate when estimating the amount of money required.
- recognising the effect of rounding addition, subtraction, multiplication and division calculations, rounding both numbers up, both numbers down.
- interpreting a series of contextual problems to decide whether an exact answer or an approximate calculation is appropriate; explaining their reasoning in relation to the context and the numbers involved.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
