

List the possible outcomes of chance experiments involving equally likely outcomes and compare to those which are not equally likely

Learning intention

- list the possible outcomes of chance experiments involving equally likely outcomes and compare to those which are not equally likely.

Teach and model

- investigating why some games are fair and others are not.
- comparing the chance of a head or a tail when a coin is tossed.
- investigating how bias and fairness can relate to outcomes being equally and not equally likely.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
