

Plan and conduct repeatable investigations to answer questions, including, as appropriate, deciding the variables to be changed, measured and controlled in fair tests; describing potential risks; planning for the safe use of equipment and materials; and identifying required permissions to conduct investigations on Country/Place

Learning intention

- plan and conduct repeatable investigations to answer questions, including, as appropriate, deciding the variables to be changed.

Teach and model

- making decisions on the variables to be changed, measured and controlled in fair tests.
- using a map or aerial photographs to predict local sites likely to be affected by erosion.
- planning and recording the method to be used in an investigation so that it could be repeated by someone else.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
