

Solve problems involving duration, including using 12- and 24-hour time across multiple time zones

Learning intention

- solve problems involving duration, including using 12- and 24-hour time across multiple time zones.

Teach and model

- planning an international travel itinerary that covers destinations in different time zones across Asia.
- using digital tools to investigate time zones around the world and convert from one zone to another, such as time in Perth.
- recognising the challenges of planning regular virtual meeting times for a company that has both international staff and staff within different states and territories.

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
