

Choose appropriate forms of display or visualisation for a given type of data; justify selections and interpret displays for a given context

Learning intention

- choose appropriate forms of display or visualisation for a given type of data; justify selections and interpret displays for a given context.

Teach and model

- comparing and interpreting stacked bar charts, area charts and line graphs.
- using different visualisations of data, including non-standard representations such as infographics, and discussing their purpose.
- choosing the type of representations based on the data type: categorical (nominal or ordinal) or numerical (discrete or continuous).

Check understanding

- Explain the main idea and give one accurate example.
- Show the idea in a second way: with words, a model, a diagram or symbols.
- Apply the idea to a short unfamiliar situation and justify the result.

Teaching cautions

- Ask the student to explain their choice, not only state an answer.
- Check that key vocabulary is understood in a new example.
- Mix representations so the skill is transferred rather than copied.

Quick lesson sequence

- Connect to prior knowledge and introduce the key vocabulary.
- Model one clear example, then solve a second example together.
- Finish with an independent check and a short student explanation.
