

AC9M3N02 • Year 3 Mathematics

Unit Fractions and Multiples

The denominator tells how many equal parts make the whole. Fractions with the same denominator can be combined by counting equal parts.

We are learning to...

recognise and represent unit fractions including one-half, one-third, one-quarter, one-fifth and one-tenth and their multiples in different ways; combine fractions with the same denominator to complete the whole

Identify the whole

Check equal parts

Name one part

Count parts

Complete the whole

Success criteria

- I can identify unit fractions.
- I can represent multiples.
- I can use equal parts.

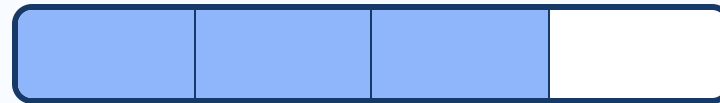

Key vocabulary

unit fraction

denominator

equivalent whole

Represent three-quarters

$\frac{3}{4}$

The whole is split into 4 equal parts and 3 parts are selected.

Complete a whole using the same denominator

$$\frac{2}{5} + \frac{3}{5} = 1$$

Five fifths make one whole.

Show what you know

Show one-third of a strip.

Think silently, show your reasoning, then explain it to a partner.

Expected response

One-third is 1 of 3 equal parts.

If students are unsure

The parts must be equal.
