

## TEACHER SLIDE

# COUNTING AND COMPARING TO 20

Ref: AC9MFN03

Maths helps us understand how many!

Let's count carefully and compare collections!

### LEARNING INTENTION

- ✓ I can count collections to at least 20.
- ✓ I can compare groups and tell which has more, fewer, or the same.
- ✓ I can explain how I know.

### KEY VOCABULARY

- count
- compare
- collection
- more
- fewer
- same
- greater
- less

### SUCCESS CRITERIA

- ✓ I can count collections to 20.
- ✓ I can compare two groups.
- ✓ I can use the words more, fewer, and same.
- ✓ I can explain my thinking.

### HANDS-ON ACTIVITY

Give each pair of students two collections of counters.

Students:

- 1 Count each collection.
- 2 Compare the amounts.
- 3 Say:
  - "\_\_\_\_\_ has more."
  - "\_\_\_\_\_ has fewer."
  - "They are the same."

### WHAT ARE WE LEARNING?

When we count, we find how many objects are in a collection.

Then we compare the numbers.

A bigger number means **more**.

A smaller number means **fewer**.

Equal numbers mean the **same**.

### EXAMPLE

15 is more than 12.  
The stars have **more**.  
The apples have **fewer**.

### GUIDED PRACTICE

Count each group and compare.

Group A

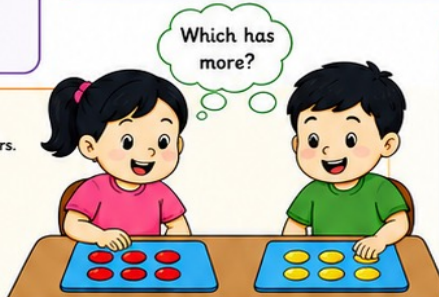

Group B

- 1 Count Group A.
- 2 Count Group B.

- 3 Which group has more?
- 4 Explain:

I know \_\_\_\_\_ has more because \_\_\_\_\_ is greater than \_\_\_\_\_.

### DISCUSSION QUESTIONS

- How did you count carefully?
- Which group has more?
- How do you know?
- Could we line the objects up to compare?

★ Good mathematicians count carefully and explain how they know! ★
