

Showing Data in a Picture

AC9M1ST02 Represent collected data for a categorical variable using one-to-one displays; compare the data using frequencies and discuss the findings.

Learning Intention: I can show data in a one-to-one display and compare the groups.

1. One for One

One picture for one thing.

one drawing = one vote
line them up.

2. Sort

Put pictures in groups.

all dogs together, all cats together
make neat columns.

3. Compare

Count each group.

which has the most?
which has the fewest?

💡 Model It

Favourite pets: dogs has 3 pictures, cats has 2, fish has 4. Fish has the most because 4 is the biggest count.

Let's Talk

How many does one picture stand for?

Which group has the most?

Most or fewest?

How many more does the top group have?

For Teachers & Parents

Make a one-to-one display:

one drawing or object per answer.

Line up equal-sized pictures:

so columns can be compared.

Count and discuss the findings.
