

Naming Arrays for 12

Elaboration 1 · Making, naming and comparing arrays

ELABORATION FOCUS

Making and naming arrays, and using bar models to solve simple multiplying and sharing problems.

LEARNING INTENTION I can make arrays for 12 and name them.

Make it

Name it

3 fours

4 threes

Same total

1

Make the Array

Step 1: choose 12 counters.
Step 2: lay them in equal rows.

2

Name the Array

Say how many rows, then how many in each row. Three rows of four is "3 fours".

3

Turn It Around

Turn the array and it becomes "4 threes". The total is still 12.

MODEL · TWO ARRAYS THAT BOTH MAKE 12

The same 12 counters, laid out two different ways.

3 fours

3 rows of 4

4 threes

4 rows of 3

3 fours is $4 + 4 + 4 = 12$, and 4 threes is $3 + 3 + 3 + 3 = 12$.

TEACHER MODELLING ROUTINE I do → We do → You do

WATCH FOR

Naming rows and columns the wrong way round, or making rows that are not equal.

REMEMBER

Rows first, then how many in each row. 3 fours and 4 threes both make 12.

MATERIALS

Counters, grid paper, array mats, bar model strips, sticky dots.
